Manifolds The proper design of the manifold is one of the essentials to a free and perfect washing filter. The requisite is that each square foot of the filter bottom shall always have the same volume and pressure of wash water applied to it that every other square foot has. In order to do this the cross sectional area of the manifold usually decreases as its length increases. Where the filter bottom is large, as in the case of a four-million-gallon unit, the filter bed is generally divided into sections and each section is supplied by a branch of the main manifold, and these in turn reduce as the...
