Excerpt: . . . of Hobarton, Toronto and elsewhere, may depend upon the manner in which, at different hours, these two causes (probably with others) combine together. 1 In relation to the cold of the upper atmosphere and the occurrence of its maximum (at certain levels at least), not at midnight but hours after, how often do we in this country see a clear bright night, and then just before the Bm rises, the formation of a veil of clouds high up, and, upon his appearing, their dissolution and passing away! In these cases the clouds show the time of greatest cold above by their formation, and by their dissolution its quick and change into increasing warmth. 3013. Though the declination varies little or nothing between 17h and 21h, no westening then appearing (3010.), still I should expect a marked action on the inclination at that time, and conclude that it will be on the increase; but I have not been able to obtain a table of the daily variation of inclination. 3014. In the month of February the same remarks apply; but as the sun is now coming from the southern signs and drawing nearer to St. Petersburg its power is increasing, and this is shown by making the cold eastening for 15h, 16h and 17h less in extent than before by more than half a minute (of a degree), and by absolutely overcoming it and making a return westwards between 17h and 18h, before the...
