Excerpt: .the rock is more massive and therefore fresher and harder. The hardest rock is at the eastern end of the quarry and here a sample was taken. The rock is technically a granodiorite, although it is always known as a granite. It is light gray and coarse grained. According to the test it is a hard rock, with low toughness, average resistance to wear, and fair cementing value. It is only suitable for the foundation course in plain macadam construction. Serial Number 56. This sample was taken from a point one-fourth of a mile north of Scenic, alongside the railway track. At this place there is a steep rocky slope of 500 feet between the track above and the track below, where the railway makes a great loop in climbing the mountains. At the base of the slope a face of rock 40 feet..
